Most Repeated Questions

INSTRUCTIONS

These questions are selected based on previous year university exams.

Practice these questions to understand important concepts deeply.

Focus on frequently asked topics and their variations.

Solve these questions within the given time for better exam preparation.

Revise regularly and test yourself to improve your score.

Practice Smart • Stay Consistent • Score High!

Most Repeated Questions Data Structure

Asked in 2 Papers

- **Linked List related questions**

1. What is a linked list? Explain its advantages.
2. Define a linked list and explain any one type with examples.

- **Tree Traversing related questions**

1. What is tree traversing? Explain any one with suitable examples.
2. Define and explain Inorder, Preorder, and Postorder Traversals.

Searching related questions

1. What is Linear Search?
2. What is Binary Search? Explain Binary Search algorithms with suitable examples.

Sorting related questions

1. What is Sorting? Explain Bubble Sort Algorithm with suitable examples.
2. What is sorting? Explain quick sort with algorithms and suitable examples.

Binary Tree related questions

1. What is a Binary tree?
 2. Describe the differences between binary tree and binary search tree.
 3. Explain Complete binary trees with examples.
-

Asked in 1 Paper

1. What are primitive data structures?
 2. What is traversing in an array?
 3. What is the PUSH operation in a stack?
 4. What is a Doubly linked list?
 5. What is Merging?
 6. What is Linear Search?
 7. When overflow condition occurs in Queue?
 8. Explain the various operations performed on data structures.
 9. What is an array? Explain the memory representation of the array.
 10. Explain the algorithm to insert the element into the array.
 11. Explain the process of traversing an array with an example.
 12. What is Stack? Explain the algorithm to remove elements from the stack.
 13. What is Queue? Explain Priority queue with example.
 14. What is Indexed Sequential Search? Explain with suitable examples.
 15. What is Sorting? Explain Bubble Sort Algorithm with suitable examples.
 16. What is a linked list? Explain its advantages.
 17. Explain Complete binary trees with examples.
 18. What is sorting? Explain quick sort with algorithms and suitable examples.
 19. Define a tree. Explain the three key terminologies used in trees.
 20. Explain the memory representation of a linked list with an example.
 21. Define and explain Inorder, Preorder, and Postorder Traversals.
 22. What is Binary Search? Explain Binary Search algorithms with suitable examples.
